

Document Records Management Assignment

Oracle AI Agent Studio – Trainee Assignment

1. Objective

Design and configure an Oracle AI Agent Studio assistant based on the assigned business use case. The solution should demonstrate clear conversational flow, correct use of tools/topics, and appropriate validations.

2. Expected Deliverable

Submit screenshots of the configured agent and test execution, along with a document capturing the implemented flow, assumptions, and key details.

3. Use Case Requirement

Assistant Name

Records & Documents Concierge

Business Goal

Design an assistant that helps users retrieve document type configuration and manage document records based on those configurations.

Functional Requirements

- Identify the logged-in worker at the beginning of the conversation
- Retrieve today's date wherever relevant
- Search and display document type details
- Search and display document records based on user request
- Create a document record using the selected document type rules
- Update an existing document record
- Provide a link to view approved or pending document transactions

Expected Conversation Flow

- Identify the user and understand the request intent
- Determine whether the user wants to search, create, update, or view records
- Ask only for required missing information
- Use document type configuration before create or update actions
- Show a confirmation summary before submission where applicable
- Provide a success response and deeplink when relevant

Suggested Topics / Actions

- User identification
- Document type search
- Document record search

- Document record create
- Document record update
- Transaction deeplink

Sample Test Scenarios

- Show me the configuration for Passport document type
- Find my uploaded driving license record
- Create a new visa document record effective today
- Update the expiry date of my passport record
- Open the pending transaction for my uploaded certificate
